DARASIMI OLANIRAN

Full Stack Web Developer Location: Iwo, Osun State, Nigeria | Email: darasimi0603@gmail.com | Phone: +234 704 027 5467 Portfolio: codewithdara.vercel.app/ | GitHub: github.com/FavourDarasimi

PROFESSIONAL SUMMARY

Full-stack software engineer specializing in scalable backend systems with Django REST Framework and modern frontend development with Next.js. Experienced in designing secure APIs, authentication systems, AI-powered applications, and production-ready web platforms. Passionate about solving complex engineering problems and building software that scales.

TECHNICAL SKILLS

- **Languages**: Python, TypeScript, JavaScript .
- **Frontend**: Next.js, React.js, Tailwind CSS.
- **Backend**: Django, Django REST Framework (DRF), PostgreSQL, Redis, Celery, Celery Beat, JWT Authentication.
- **DevOps**: Git, GitHub, Docker, Vercel, Render.

FEATURED PROJECTS

Auth System GitHub

Stack: Python, Django, Django REST Framework

Designed a security-hardened authentication system that closes common account-takeover gaps: TOTP MFA with backup codes, refresh-token rotation with reuse detection, brute-force lockouts, and full login audit trails — built as a reusable drop-in module for other projects.

GemmaCode Live Demo | Frontend GitHub Backend GitHub

Stack: Next.js, TypeScript, Django REST Framework, Google Gemma (via Gemini API)

Built a full-stack AI coding assistant end to end — from secure login (JWT + GitHub/Google OAuth) to real-time streaming chat with persistent history — demonstrating the ability to ship a complete, production-style LLM-powered product solo.

Notification System GitHub

Stack: Python, Django, Django REST Framework, Celery, Redis, Pusher

Built a real-time notification microservice that guarantees reliable delivery at scale — automatic retries with backoff, idempotency keys to prevent duplicate sends, and full delivery audit logs — plus scheduled digest emails and automated data cleanup to keep the system self-maintaining.

Plantley Live Demo | Frontend GitHub Backend GitHub

Stack: Next.js, TypeScript, Django REST Framework, TensorFlow/Keras

Built an ML-powered app that gives instant tomato disease diagnosis from a photo, enabling early intervention without needing an agricultural expert on hand — paired a camera-capture frontend with a Django API serving a Keras CNN model.

Veylora Interiors Live Demo | GitHub

Stack: TypeScript, Next.js, Tailwind CSS, Framer Motion

Built an interactive portfolio site that helps an interior design studio showcase past work convincingly — including a before/after comparison slider that lets prospective clients see transformation quality at a glance.

Steel Groove Construction Live Demo | GitHub

Stack: TypeScript, Next.js, Tailwind CSS, Framer Motion

Built a multi-page marketing site that communicates a construction firm's process and credibility to prospective clients, using animated process breakdowns and a dedicated project showcase to build trust before first contact.

Nexus Events Live Demo | GitHub

Stack: TypeScript, Next.js, Tailwind CSS, Framer Motion

Designed and built a 5-page luxury brand site from scratch, translating a premium positioning (dark/gold theme, custom animations) into a cohesive multi-page experience with an interactive filterable gallery.

AuraByDassy Live Demo | GitHub

Stack: Next.js, TypeScript, Supabase, Tailwind CSS

Built a full-stack e-commerce platform that lets a Nigerian fashion brand sell directly online — replacing manual/social-media order-taking with a self-service storefront and a custom admin dashboard for inventory and order tracking.

PROFESSIONAL EXPERIENCE

Freelance Full Stack Web Developer *Self-Employed | January 2023 – Present*

EDUCATION

Federal University of Technology, Minna
Bachelor of Engineering, Chemical Engineering (Expected 2028)

ADDITIONAL INFORMATION

Languages: English (Fluent)

Interests: Open Source Contribution, Web Performance Optimization, Cloud Technologies

Availability: Open to full-time, contract, and freelance opportunities

References: Available upon request.
